

DIGA-Soft International Ltd.

Dear Sirs,

Thank you for your interest in our product.

The DIGA-Consult is the most complete available programming device for digital speedometers. The system is a high-quality tool, which offers a maximum of flexibility and working comfort despite simple operation.

Outstanding characteristics of the system are:

- The current odometer reading is decoded and indicated.
- Intuitive operability by clear menu guidance.
- Light display.
- Menu guidance in different languages (D, E, F, I, ESP, POL,)
- All data can be edited, stored and loaded.
- The stored data can be transferred to a PC for archiving.
- Defective speedometers can be comfortably repaired.
- You can download developed software directly through our internet server.
- New types and marks can be de-energised within seconds by telephone.
- The annoying post office dispatch of the equipment is void.

With purchase a briefing and a constant telephone support are natural for questions and problems by us.

The prices for the different versions are:

Version 1: 6,000,- euro + 19% tax

Version 2: 9,000,- euro + 19% tax (+ our hotair-soldering station DIGA-Station for free)

BMW-Upgrade: 2,500,- euro + 19% tax

(19% tax: except EC consignees with sales tax ID no. or export to a non-member country)

These versions you can supplement at will with other models.

Contained in each case are the DIGA-Consult, all necessary plugs, cable, guidances (detailed CD Rom with guidance for all models), special tools, etc... Further we stand for our customers always for questions for order, both by E-Mail and by telephone.

If you should wish an individual software package, communicate to us please, which models you need and we create you an offer.

I hope, this offer is interesting to you. For further questions please contact me.

Yours sincerely,

[DIGA-Soft International Ltd.](http://www.diga-soft.de)

The DIGA-Consult: Each package contains the Diga-Consult, all necessary plugs, cables, guidances (cd-rom with manuals for all models)

Also have a look at our other products for odometer programming specialists:

The DIGA-Station: Our HotAir-Soldering station especially for SMD-work on clusters

new products like the DIGA-Counter for solving the problems for the programming of the Renault Sagem - clusters are in progress and will be released soon!

References to the DIGA-Consult – Modelist:

Diagnosis-plug: programming is made in few seconds by the Diagnosis-Plug interface of the vehicle

Cluster-plug: the removed cluster is connected and programmed with the DIGA-Consult

Directly: the Cluster must be removed and opened for programming. Partly soldering work is necessary.

Version 1 is the basic version.

With it the most usual vehicles can be programmed. Ideally for newbies.

Version 2 is suitable for the professional.

Here also exotic cars are contained, with which soldering work on the processor is contained.

BMW-Upgrade is suitable for the BMW professional.

The hard and software for the treatment of the BMW keys and light modules.

The BMW-Upgrade is functions only in connection with a DIGA-Consult handheld.

Programming techniques:

diagnosis-plug:	programming without removing the cluster
cluster-plug:	programming without opening the cluster
eeprom:	programming the eeprom by clip
soldering contacts:	programming by soldering contacts on the circuit board
processor:	processor direct programming
